

# Superabundant Features

>> CONT. FROM PAGE ONE

- Choose as you like: In-premise or Cloud
- Easy-to-operate testing process
- Test across diverse network capabilities and carrier environments
- Test native, hybrid & browser based app
- Automatic script writing, UI driven script editing; integration with other open source automation solutions
- Simulation of third party interruptions to test app behavior
- Iterative and conditional execution; assertions, regressions etc.
- Auto-execution (Auto-installation of target app) on multiple devices through Remote Device Cloud Manager
- Object-based comparison, Image and OCR comparison for objects on screen
- Seamless integration - CI tool (Jenkins)
- Record and execute type, Auto-re-record test cases
- Integration with defect tracking tools like Bugzilla, HP ALM and JIRA
- Release and version management
- Rich analytics and reporting system

“Essentially, Mobile Test Automation plays a pivotal role towards your success in this highly fragmented marketplace.”

Want that your Enterprise app run seamlessly across myriads of handsets, diverse geographies, varied network environments over the various flavors of operating systems and hardware configurations? Your budgets are tighter, time to market is stringent and what about a comprehensive friend-like tool that shows you way out... A tool which strives to make your app's user experience

awesome and amazing. How it makes so is by automating the simulated scenarios and environments on which you always wanted to test your app upon and which makes your app highly stable and superlatively usable. It should not just virtually act as a facilitator or a fractional enabler to manage your testing processes but provide an end-to-end automated testing solution

## POWER - A Glimpse

### RECORD-EXECUTE

A simple and one to the most efficient way to mobile automation testing – Record and Execute. Not just this, auto-re-record test cases which execute test cases on device and record new test cases automatically with new screenshots. This facilitates your comprehensive and diverse testing needs.

### INTERRUPTIONS

Ah, that's the pain point for we QA engineers. mAutomate understands this pretty well. It provides extremely easy-to-use and implement events in the form of interruptions option that includes Network availability change, screen orientation, app data clearance, scrolling, change in background etc. No more the testers now would have to manually check the impact of sudden interruptions. What do you say, will that accelerate time to market and thoroughly test your enterprise app?

### DEFECT TRACKING

How to achieve a bug-free and high quality enterprise app! mAutomate automatically logs bugs in the required tool whenever a defect is encountered and updates you over email.

An Enterprise App release – without thoroughly testing its overall *quality* (responsiveness and transition etc.) & *performance* may be a crucial risk to your company reputation.

## Advance Innovation while controlling costs

## Continuous Integration? Retain code in executable state, Maintain code in deliverable state

Distributive development environment, cosmopolitan teams

across geographies. Need seamless code integration, ensure that the code is compilable. Are unit as well as automation test cases running impeccably? Do I need to perform manual testing each time the build is compiled? Is my agile process based on traditional testing practices? So, what do we do to answer these questions? mAutomate tool automates this process in challenging agile environment by offering integration with Jenkins/Hudson; empowering you to rectify issues sooner through remarkable user interface and accelerate time to market.

How to achieve the best app rating across myriad handsets, carrier environments, operating system versions, diverse geographies working in an agile work environment? While working with an agile work method, most projects introduce testing at the end of the development cycle because of lack of knowledge of thorough test automation tools that offer seamless integration with CI tools. mAutomate impeccably orchestrates with agile. It automates test processes and simulates innumerable hypothetical scenarios that were once thought of impossible with script-less or code-less frameworks.

## ITECH UPDATE

mAutomate MAKING A MARK OVER WEB “mAutomate - Discover the excellence, embrace the brilliance” provides a glimpse to the extensive features of mAutomate. Also, briefly talks about its ease of use, compatibilities, technologically advanced features in the comments section.

### THE TOP 10 STRATEGIC TECHNOLOGY TRENDS FOR 2014

According to one of the Gartner researches, **Mobile device diversity and management** stood first and **Mobile apps and applications** stood second in the top 10 strategic technology trends for 2014 which further says that that have the potential to disrupt individuals, businesses and IT organizations.
